

Bibliography on the Accessibility of Museums and their contents to Visually Impaired People through Digital Technologies

Introduction and Instructions for use of the Bibliography

As the introductory Step of broader Research of the needs of Visually Impaired People in the Museum context, for the purpose of the International Project SHIFT, the „Balkan Museum Network“ created a detailed Bibliography of published works on enabling Accessibility to Museums and their Contents to this Population with Digital Technologies. We have conducted a Systematic Review with a selection of 158 examined Articles covering 2000 to 2023. Three databases have been used in the exhaustive Search and Selection: Google Scholar, Semantic Scholar, and ERIC. The examined Article Abstracts that are selected for the Bibliography show the increased interest of Museums in the Inclusion of Visually impaired People in the last 23 Years and the corresponding increase in the Use of Digital Technologies in the Museum Context for this Purpose.

The Bibliography consists of Scientific Articles, Reports of various International organizations on this topic, Ph.D. dissertations and master's theses, Book Chapters, Proceedings of International Conferences, etc. The Bibliography is compiled in MLA (Modern Language Association) format and is listed in Alphabetical order. Book Titles are given in italics, as well as journals in which Scientific Articles were Published. Every item listed in the Bibliography can be found online using a Search browser.
